Product Description

Microtap Supercut HD Compound is a hand applied metal cutting paste. It is manufactured from concentrated extreme pressure additives, lubricity improvers and other additives including a thickening agent.

It is a soft low melting point paste easily applied by brush to workpiece or tool edges.

Applications

Microtap Supercut HD Compound offers extended tool life improved surface finish and easier machining due to lower power requirement and increased metal removal rates.

HD Compound also offers excellent cutting performance on steels and certain other alloys. It adheres to the cutting tool / workpiece and melts as cutting progresses to flow to the cutting edge.

- Combination of extreme pressure and lubricity additives
- Suitable for high speed applications
- Excellent cutting performance on high alloy steels and non-ferrous metals
- Improves surface finish
- Maximises tool life
- Flows to cutting edge
